

# Capstone Project - WebChat

Sebastian Dziewulski

# Project overview

---

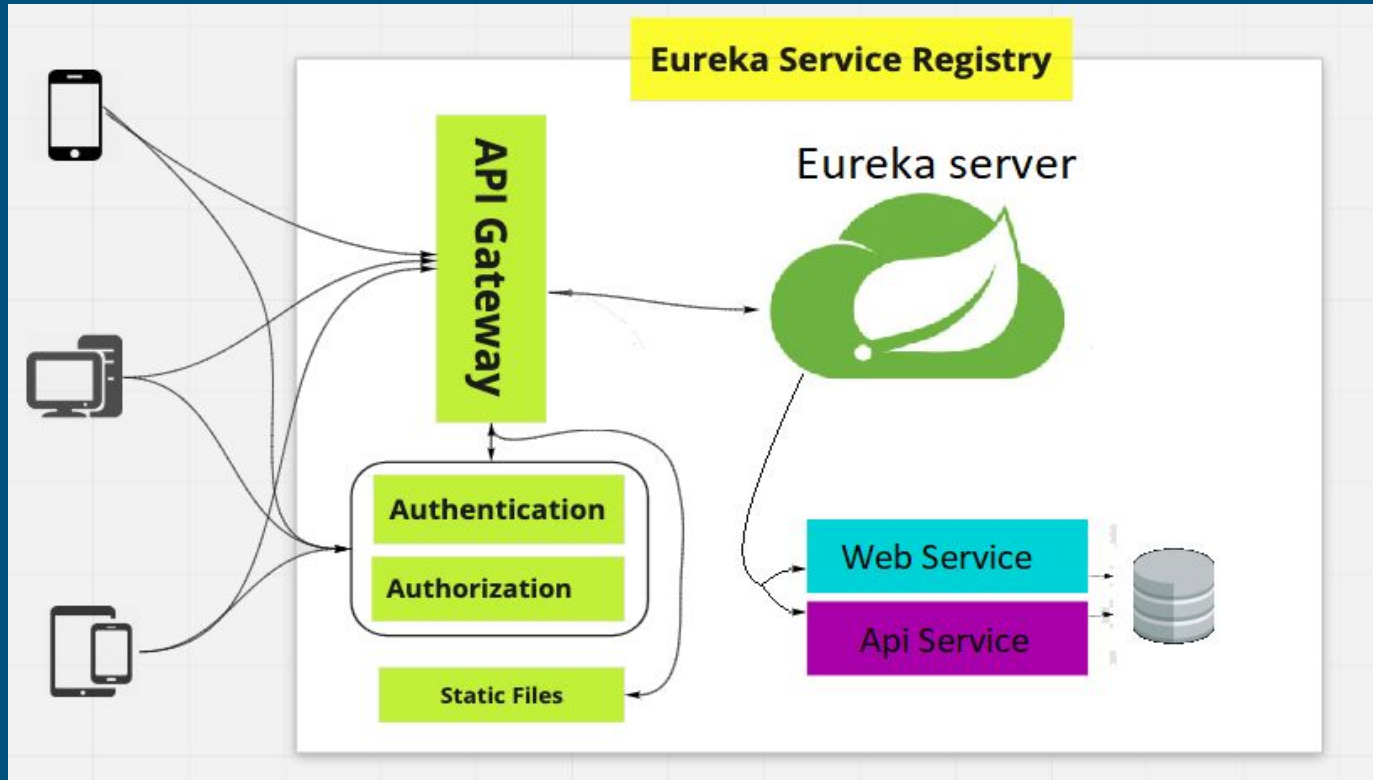

A web service containing chatbot for users and chats history for admins.

# Features

---

Students are able to register, log into their account and chat with bot assistant regarding useful information about their data and a campus. The administrators have access to every chat history.

# Architecture

# Deployment

---

There must be eureka server running first. With JDK and MySQL servers setup on proper ports we will be able to connect to the chat bot

# Guide

---

With this basic interface user is able to create his account or log into it from the home page. After that the user can freely ask the University Assistant questions related to the campus. The administrators after logging in are able to view the history of chats and select any of them to read it.

# Bug list

---

Graphics are not displayed before authorization.

When a user is logged in, the other one can log him out by logging in.

Administrator doesn't have edit options for the chats.

# Thank You

---
